

Data for Measuring Access to Care

Access is at the root of all high performing health centers: “without access, without appropriate access, and without demanded, appropriate access we cannot provide value”.

During this session, participants will:

1. Be introduced to tools that allow you to measure and analyze current and future access issues within your organization, including: 3rd Next Available (the Centerprise version), Empanelment, Continuity of Care reports, payer attribution lists and more
2. Understand how to address key drivers and common barriers to access, including: scheduling, patient engagement and high functioning care teams
3. How alternative access methodologies can improve overall patient satisfaction and engagement (Pt. Portal, telephone and alternative visit types)

Presented by: Shannon Nielson, Centerprise, Inc.

Presented on: Tuesday, June 6, 2017
